

COPPER LOCKER

Copper Lockers stop potential thieves before they get to first base by replacing the existing cover on an in-ground Type 1 or Type 2 pull box, break away bases and hand hole covers for light poles.

Copper Locker DE 500 Series is designed to fit break away bases for the support of light poles. They are made out of stainless steel and can be ordered powder coated.

Designed to house the round shackleless lock, Copper Locker DE 500 Series can be ordered keyed alike, specific to each and every municipality keeping your district secure. For locations with harsh conditions such as coastal regions or over bridges/waterways, Copper Locker DE 500 is made out of stainless steel.

There are several sizes available and note the size required when placing an order.
